Bring microfilm online with the ST200 digital microfilm viewer-scanner system

Microfilm collections cover the spectrum of subject areas and provide access to rare materials that enhance research and study. However, in the electronic age, these precious collections are often forgotten and when remembered, can only be viewed using cumbersome equipment.

Not any more. Since 1938, ProQuest Information & Learning have been providing institutions around the world with access to research collections, periodicals and newspapers in microfilm format. We have always recognised the importance of the materials contained in microfilm for academic study and have worked with institutions to make these available to students and researchers around the globe. We are pleased to introduce the ST200, a revolutionary digital microfilm viewer-scanner system that makes microfilm as easy to access as the internet. This unique system utilises the PCs in your institution to provide clear images of your microfilm collections which can be printed out, emailed or copied to CD-ROM.
The ST200:
• Links to your existing PCs
• Prints on your existing network printer
• Looks and acts like a PC
• Displays microfilm images on the computer screen itself
• Allows users to email or save images to CD-ROM via your network

Since the image quality is superb regardless of ambient lighting levels, you can use the ST200 wherever you have a PC to link it to. Its compact size ensures it’ll fit in your standard workstations, taking up just 20 inches of desktop.

More microfilm use, less research time
The ST200 is the first technology that provides access to both online and microform content from a single workstation. It gives your microfilm collection a new audience whilst reducing research time.

With the ST200, there’s no need to move from room to room. Even better, there’s no learning curve; it works with your library’s networked PCs, so patrons use the same familiar keyboard and front end. Graphical task bars make printing and saving easy, so users can focus on what they want to do, not how to do it.

Top-quality images, flexible imaging
It’s easy to view, zoom, invert polarity, crop, scan, flip, burn to CD, send to email and more in real time via high-end video, complete with extreme zooming and autofocus. The revolutionary scanner technology lets you scan film at resolutions of up to 2700 dpi, yet keep file sizes small - just 1-2 megabytes in popular compressed file formats. The built-in Scanwrite® imaging enhancements make even service film readable.

You can take it with you
The ST200 gives researchers plenty of ways to apply their findings. Because the content scans are in standard formats such as JPG, TIFF and PDF, it’s easy to import images into other documents like reports; print to network printers; email or save to portable media. Books, newspapers, magazines - whatever you have in microform, your patrons can make it part of their research.

At the end of each session, the software automatically clears the stored images for the next user. Librarians have complete control over the functions and can activate and de-activate them as needed.

Key features:
• Exceptionally clear scanned images with even light and contrast for true archival quality
• View images in real-time, a live digital video feed sent directly to the PC monitor
• Direct film scanner for 16mm and 35mm roll film
• Scans directly from film, not from a projected image like other reader/scanners
• Automatic focus, real-time video, crop images, view negative film as positive, rotate image 90/180/270/360 degrees
• Viewer lens size, focus and light levels do not affect scan quality
• Scans up to the full 16mm or 35mm width of roll microfilm by a 36mm per frame
• Images can be printed directly from the screen—there is no need to scan or save images prior to printing
• Toggle between real-time video and PC in one monitor or use a separate monitor for PC functions
• Zoom out to full page or zoom in to read small text with a single lens
• Film is preserved - no glass in contact with film avoids scratching the film
• Self-contained illuminated base, not affected by ambient light conditions
• Includes Scanwrite®, Patron-Friendly Library Scanner Software and Adobe Photoshop Elements™

For further information about the ST200, contact your local sales representative.
Despite the continually developing array of digital technologies—and sometimes because of it—information professionals at libraries and universities worldwide still rely on microform. They know it is an archival medium that will meet the needs of researchers for years to come. Microform provides many advantages including:

- **New Viewer/Scanners** – Images can now be easily sent to remote locations using microform viewer/scanners, which link to your computer workstations, letting you view and print articles or digitise and transmit them electronically. This approach combines the unparalleled preservation and storage benefits of microform with the speed and ease of electronic access.
- **Special Collections** – Microform is the answer if you need hard-to-find or specialty resources. Many older newspapers and periodicals are available only in microform, and it gives your users access to complete page images from historical titles—often from the first issue forward.
- **Space Savings** – Microform lets you store an extensive collection of complete article images in a small amount of space. Microform takes up less than one-tenth the area of bound copies of newspapers and periodicals.
- **Ownership** – There is no upkeep or access fees. It uses stable, proven technology you already have, with no need for new workstations or continual software upgrades.
- **Clarity and Accuracy** – Microform is the answer if you need cover-to-cover clarity and accuracy. Full-image articles are essential to getting the full story.
- **Complete Collection** – Microform usually is the best solution if you need a complete collection fast. Maybe you’re seeking accreditation or even rebuilding after a disaster. An extensive, customised collection of retrospective and current microform titles will meet the needs of your researchers quickly and efficiently.
- **Support for Specialised Studies** – A compact collection in microform will meet specialised research needs and still leave plenty of resources for the rest of your population. Many libraries also use microform as an added point of access for content that is most in demand.
- **Durability** – archived properly, it can last for generations, and there is no degradation of images.
- **UMI Quality** – UMI’s microform images are taken directly from the original printed pages, so you always get the clarity of first-generation copies.

Since 1938 UMI have been producing Microfilm. Our depth of experience, rich heritage and our ability to provide you with extensive access to thousands of periodicals, newspapers and research collections (many of which are not available through any other source) ensure UMI has something to meet all your microfilm needs.

Availability subject to change. Titles with an asterisk* may require additional delivery time. Please inquire.

Using this Catalogue
This microfilm catalogue has been designed to help researchers locate the specific microfilm content they are looking for. Further information on each collection’s contents can be found using UMI’s online guide, found at http://www.il.proquest.com/go/subjectcatalogs. Should you require further information, or wish to place an order, please contact your local ProQuest UMI Sales Representative. You will find details of our international offices at the back of the catalogue.
