Title Matching Fast (TMF)[™]

82.1% of academic libraries say that space reclamation is currently a priority or will be in the near future. Of these libraries, 65.5% are weeding print books and offering in electronic format instead and 19.7% are duplicating high circulating print books in electronic format.¹ ProQuest developed its complimentary Title Matching Fast (TMF) service to support libraries in these and other unique ways that they're saving space and better serving users.

Save Time & Money with TMF

TMF helps you accurately and quickly match print and electronic books ISBNs to various collections on the Ebook Central platform. A complete and easy-to-use assessment service, you provide your ISBNs and we provide data cleaning, data matching and a detailed reporting output that recommends the most efficient and inexpensive options based on your own data.

With TMF, you can:

Reclaim space

Make heavily circulating print titles more available in electronic format, opening up physical space in your library.

Reduce costs

Purchase digital titles that generate high costs through ILL. Deduplication allows you to easily avoid purchasing low circulating titles in multiple formats.

Extend your library's reach

Duplicate popular print titles in the easily discoverable ebook format to support remote campuses and provide easier access to the library's resources after hours.

* Publisher-driven restrictions apply.
